

Reflection for GGP Module

After learning about General Gardening Practices, are there any methods or practices that were familiar to you? Any that surprised you? Any that you realized you could improve or do differently?

- 1) In thinking about what you have learned this week, what is something that you are going to do differently and how does that fit with the IPM framework?
- 2) Predict how this will change your success in gardening (i.e. increase yield, or less disease).
