

## Reflection for IPM Module

---

This week you learned about Integrated Pest Management, which we refer to as IPM. The building blocks of the IPM pyramid help us make informed decisions when addressing plant problems.

- 1) Take a moment to consider how you or someone else had approached a pest issue or plant problem in the past.
- 2) Briefly think of two or three ways that the pests or problems were addressed.
- 3) Now compare those ways to how they could be improved using an IPM strategy.
