

Notes with Answers for Fruits Module

Selecting crops and cultivars

List the general factors for selecting crops and/or cultivars.

- *Hardiness*
- *Length of growing season*
- *Space*
- *Time available for management*

Fruit crop botany

Define pollenizer and give an example.

A plant that is a source of pollen transferred by a pollinator for cross fertilization.

Example: Ornamental crabapple used to pollinate cultivated apples.

Define pollinator and give an example.

An agent of pollen transfer; usually insects.

Example: Bees.
